

Don't let its good looks fool you . . . Sequel is "workhorse" flooring suitable for a variety of heavy use commercial installations including those with rolling loads and forklift traffic as well as ramps, rooms and corridors with significant foot and cart traffic.

Sequel is a vulcanized rubber tile manufactured with a blend of homogeneous SBR and natural cork. Since vulcanized rubber is created with a combination of heat and compression, it is extremely durable. The durability and dimensional stability of Sequel tiles make it an excellent choice for tough commercial applications. Sequel is soft under foot with excellent resistance to abrasion, impact, scuffs, and many common chemicals.

Offered in 19 11/16" x 19 11/16" x 3mm square edge tiles, in 20 colors from white to black, Sequel is easy to maintain and does not require a floor finish. Sequel can be continually restored by dry-buffing which decreases long-term maintenance costs and use of harmful chemicals.

Think of Sequel as the *Beauty and the Beast* of the vulcanized rubber flooring category.
